EHUWA GABRIEL AYOMIKUN

EVALUATION SPECIALIST CANDIDATE | COMPUTER ENGINEERING STUDENT | TECHNICAL RESEARCH & ANALYSIS

Lagos, Nigeria • +234 907 681 5476 • gabrielehuwa92@gmail.com
GitHub: github.com/Leogabson • Portfolio: leogabson.vercel.app

PROFESSIONAL PROFILE

Computer Engineering undergraduate and software developer with hands-on experience investigating technical problems, researching unfamiliar concepts, evaluating system behaviour, and communicating findings through structured documentation. Project experience spans full-stack software development, computer networking, broadcast engineering, and hardware systems. Brings an analytical approach to breaking down complex questions, checking technical consistency, comparing possible explanations, and refining solutions. Interested in applying these strengths to AI evaluation work, including developing challenging question-and-answer tasks, assessing model outputs, verifying claims against reliable sources, and producing clear, evidence-based explanations. No prior professional AI-training experience is claimed.

ROLE-RELEVANT STRENGTHS

Research & source evaluation: Finding relevant technical information, consulting documentation, comparing explanations, and checking whether conclusions are supported.

Analytical thinking: Decomposing multi-step problems, tracing cause and effect, testing assumptions, and assessing technical correctness.

Written precision: Explaining technical processes and findings in clear, structured language.

Attention to detail: Reviewing configurations, requirements, system behaviour, and documentation for inconsistencies.

Self-direction: Independently learning unfamiliar tools and concepts and carrying projects through development and iteration.

Quality mindset: Prioritizing correctness, completeness, reproducibility, and alignment with stated requirements.

TECHNICAL KNOWLEDGE

Programming: JavaScript, TypeScript, Python (Flask-based development), HTML5, CSS3.

Software: React, Next.js, Tailwind CSS, Node.js, Express.js, Flask, Flask-SocketIO, REST APIs.

Data: MongoDB, SQLite; database integration and data persistence.

Tools: Git, GitHub, Visual Studio Code, Vercel, Google Cloud Console.

Computer systems & networking: OSI and TCP/IP models, IP/MAC addressing, routers, switches, firewall fundamentals, LAN infrastructure.

Engineering systems: CCTV, broadcast signal workflows, SDI/HDMI, fibre-optic transmission, embedded-systems fundamentals, solar inverter systems.

RELEVANT EXPERIENCE

SOFTWARE DEVELOPER & TECHNOLOGY PRODUCT BUILDER

Independent Software Development | Nigeria

- Investigate product requirements and technical challenges, break them into manageable components, and develop practical solutions.
- Research framework documentation and unfamiliar technologies to guide implementation decisions.
- Test application functionality, troubleshoot unexpected behaviour, and refine features based on observed results.
- Work across frontend, backend, database, authentication, and deployment concerns, requiring attention to consistency between system components.
- Document project functionality and technical decisions while managing development work independently.

BROADCAST ENGINEERING & MEDIA PRODUCTION INTERN

Dove Television | Industrial Training (SIWES)

- Investigated operational issues involving CCTV connectivity, authentication, and configuration, developing a practical troubleshooting approach.
- Observed and worked with broadcast signal paths involving SDI, HDMI, audio embedding, fibre-optic transmission, converters, and monitoring equipment.
- Built practical understanding of network components and concepts, including routers, switches, IP/MAC addressing, and firewall fundamentals.
- Maintained and organized technical inventory and operational records using Google Sheets and physical documentation.
- Recorded technical processes and developed familiarity with encoder systems, data-centre infrastructure, and broadcast operations.

SELECTED PROJECTS

COURSEFLOCK — Founder & Lead Developer

www.courseflock.com | Academic resource and collaboration platform for LAUTECH students

- Identified a student resource-access problem and translated it into a deployed, course-centred platform.
- Developed a Past Question Vault, Course Materials feature, course communities, and GPA/CGPA calculator.
- Implemented authentication and institutional email verification and integrated email communication services.
- Iterated on features and platform workflows based on product needs and practical use.

Technologies: Next.js, React, Tailwind CSS, NextAuth, Resend, Vercel.

FLASK REAL-TIME CHAT APPLICATION

- Developed a real-time chat application using Flask and Flask-SocketIO, with SQLite for persistence.
- Explored secure communication concepts and examined how application components interact.

Technologies: Python, Flask, Flask-SocketIO, SQLite.

GATHRIO — Hybrid Events Platform

- Defined product requirements and worked on authentication, event-management functionality, and event discovery workflows.
- Worked across frontend and backend components using a TypeScript-based stack.

Technologies: Next.js, TypeScript, Tailwind CSS, Node.js, Express.js.

NEXRATE — Digital Exchange Platform Concept

- Developed a product concept for cryptocurrency and gift-card exchange services, with attention to usability, transparency, and reliability.
- Designed backend architecture using Node.js and MongoDB.

EDUCATION

LADOKE AKINTOLA UNIVERSITY OF TECHNOLOGY (LAUTECH)

Bachelor of Technology (B.Tech.) — Computer Engineering | 400-Level Undergraduate | Nigeria

Relevant areas: programming, computer networks and communication, digital electronics, computer architecture, embedded systems, and software engineering.

ADDITIONAL INFORMATION

Professional interests: Artificial Intelligence, large language models, AI evaluation, software quality, technical research, reasoning, and emerging technologies.

Work approach: Independent learning, structured problem-solving, careful documentation, and iterative improvement.
